

# Risk Management for the Business Continuity Professional Certification from DRI International

## Overview

Can you truly identify the real threats your organization faces – and how to protect against them? Risk Management has become a top priority in all sectors, from supply chain to cyber-security, and as a professional in this field, you have to be at the top of your game. That's why DRI International has partnered with the risk experts at Bowhead Systems Management to design a course and credentials specifically for business continuity professionals responsible for their organization's risk management planning. This course, developed and taught by experienced instructors, combines theory with real-world practices to give you in-depth instruction and tools you can put to use in creating a robust Risk Management program.

## Course Content: What You Will Learn

Whether you're starting out in the field, or are a seasoned Risk Management professional, DRI has a certification path that will match your experience level. For those newer to the industry, the Associate Risk Management Professional (ARMP) certification boosts entry-level proficiency of risk management concepts and practices, while showing your colleagues and employers your dedication to professionalism and continuing education. If you've conducted risk assessments or managed a risk management program, the Certified Risk Management Professional (CRMP) level is what you're looking for. It's designed for those who already have a specialized background in risk management, and proves you have the knowledge and experience needed to implement the most effective, field-tested practices.

During each stage of the 4.5-day course, you'll test your growing knowledge of risk management against practical, real-world scenarios. You'll learn to identify and respond to threats, vulnerabilities, essential function impacts, and develop cost-effective risk controls. At the end of the course, you'll be well-prepared to complete the qualifying examination that will lead you further along the path to becoming a certified risk professional. And after completing the course, you'll also receive the DRI Risk Management Toolbox to help with your future organizational analysis and planning efforts.

### **Course Objectives: What You'll Be Able to Do**

What kind of skills will you bring back to your organization? Here's just a partial list:

- Perform risk assessments and analyze potential threats
  - Get buy-in and participation from upper management
  - Reduce organizational exposure and vulnerability
  - Select effective risk controls based on cost-benefit analyses
- Implement best practices and frameworks such as NIST, ISO, Federal Continuity Directives, and others
  - Improve communication by using consistent risk management terminology
  - And much, much more.

### **Why, Where, and When**

Why should you get certified? As more organizations become aware of potential vulnerabilities and work on their defenses, proven Risk Management expertise is more important than ever for serious professionals. Training will set you apart, enhance your skills, knowledge, and abilities – all of which are transferable – and cultivate future career opportunities.

Classes are offered at various times throughout the year and across the country. Visit [drii.org](http://drii.org), call **(866) 542-3744** or email us at [registration@drii.org](mailto:registration@drii.org) for upcoming courses.
